

TRACKEREM®

TrackerEM® provides a comprehensive, web-based resource for quickly generating and sharing geographically-based situational awareness across multiple domains such as emergency management, event planning, and asset management. The application features an easy-to-use mapping capability which empowers users with the ability to rapidly create custom overlays that can be easily shared and distributed.

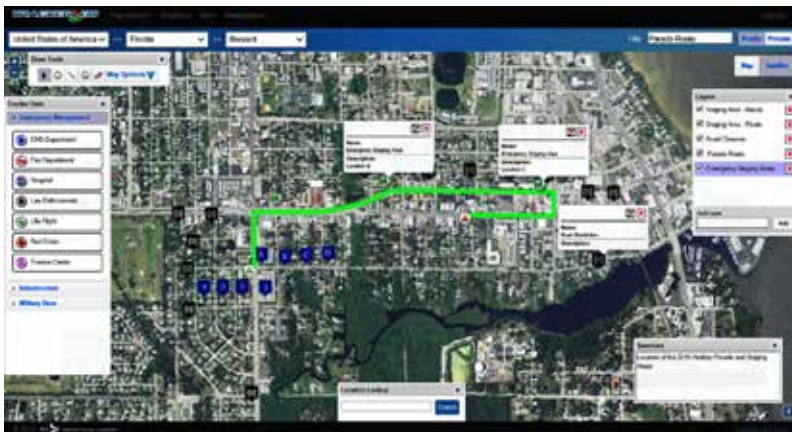

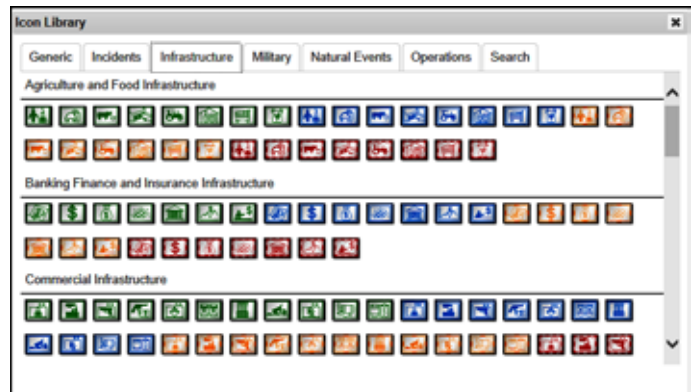

Share Situational Awareness

Use TrackerEM to create maps depicting current events and situations with the application's comprehensive icon library. Click on the TrackerEM datasets to view essential emergency management and infrastructure points of interest of a given location. Save and share your overlays with others (and other systems) using the KML export feature.

TrackerEM Features

- **Complete Set of Drawing Tools**
 - **Shapes:** Circles, lines, polygons
 - **Map Symbols:** Generic icons, National Incident Management System (NIMS) icons
- **Point & Plot Functionality**
- **National Emergency & Infrastructure Datasets**
 - **Emergency Management:** EMS Department, Fire Department, Hospital, Law Enforcement, Life Flight, Red Cross, Trauma Center
 - **Infrastructure:** Airport, Amtrak, Civil Air Patrol, Ferry, Heliport, Intermodal Terminal, Port of Entry, School, USDA Site, VA Facility
- **Export Capabilities**
 - **Formats:** KML, Excel (Datasets), PNG

Enhance Event Planning

Use the intuitive TrackerEM application to map out parade routes, identify staging areas, and document road closures. Quickly export and share the data in presentations, flyers, and other applications. Your imagination is the only limit for the potential uses of TrackerEM!
