

H-60 Bridge Tool Deluxe Kit

Deluxe H-60 Bridge Tool Kit (P/N 11280A01) NSN 5180-01-682-8374

The H-60 Bridge Tool Deluxe Kit is designed for the removal and installation of H-60 and S-70 aircraft transmission components; forward and aft bridges and bellcranks, left and right tie-rods, all eccentric bushings, and longitudinal support components. With hands-on input from H-60 maintainers, these tools were purpose-built using materials and coatings to allow for zero maintenance-induced damage. Superior to conventional methods, the Bridge Tool Kit enables a significant reduction in maintenance man-hour labor and component damage risk when performing 5-pack transmission main module maintenance.

The result is sustainable process improvement over conventional methods—returning aircraft to mission readiness faster at a reduced cost.

Benefits:

- Improves maintainer effectiveness and efficiency
- Reduces total maintenance hours
- Protects aircraft components from maintenance-induced damage
- Improves aircraft availability

Eccentric bushing removal

Aft bridge removal

Bellcrank sleeve removal
