EVC Marks Grand Reopening of Newly Remodeled ETF Facility with Community Open House

Consolidated factory, inventory, and office space brings engineering, quality, and operations teams under one roof

Johnstown, PA, August 26, 2026 – Enterprise Ventures Corporation (EVC) celebrated the grand reopening of its newly remodeled facility on the first floor of the ETF building with an open house on August 18. Colleagues, partners, and guests joined the EVC team for guided tours of the redesigned space, which consolidates the company's factory, inventory, and office operations into a single, unified footprint.

The relocation represents a strategic reassessment of how EVC's workspace supports its mission. EVC originally operated out of high bay space suited to the heavy industrial requirements of the era. As the company's work evolved, leadership determined that the original configuration no longer aligned with operational needs.

Rather than pursuing additional square footage, EVC worked with the facilities team to identify and reimagine a first-floor location previously used for light industrial activity. The resulting space is not substantially larger than its predecessor, but it is more efficient.

"This move wasn't about getting more space, it was about getting the right space. Our factory and inventory operations are consolidated now," said Ed Peretin, president of EVC. "We also have our engineers, quality team, and inventory group within a few steps of each other which has already changed how quickly we get things done."

For EVC, the new facility marks more than a change of address. After eighteen years of steady growth, the company now has a home built around its current capabilities, along with the room to keep building on it.

EVC's new space better suits the organization's performance, capabilities, and future growth.

Enterprise Ventures Corporation (EVC) is the technology transition affiliate of Concurrent Technologies Corporation (CTC). EVC's mission is to transfer advanced technologies designed and created by others to the marketplace and to deliver high-quality, competitively priced products and services to its clients. www.evc.ctc.com
